Research Statement

I am inspired by the complexity of the microbial world and the astonishing progress we have made in the field of microbial ecology over the past few decades. This progress continuously motivates me to rethink engineered systems so we can better harness the power of microorganisms to treat water and recover resources from waste stream. Most of the research projects my team and I work on strive to understand and improve various aspects of the engineered water cycle microbiome to improve human health using sustainable design approaches. We especially focus on (i) water and energy recovery from waste streams and energy crops, and (ii) drinking water systems including biofiltration, disinfection, distribution and premise plumbing.

A collaboration with an NGO in Bangladesh (Asia Arsenic Network - AAN) has been supported through a NSF-USAID PEER grant awarded to AAN. Ph.D. student Tara Clancy and I developed this grant with our collaborators at AAN. Tara Clancy and Raghav Reddy have continued to work closely with researchers from AAN to oversee the research. Two of AAN's scientists, S. Udin and A. Shamim Khan spent a month in our laboratories to learn methods relevant for the work in Bangladesh.

With graduate students Roya Gitiafroz, Adam Smith, and Dongjuan Dai, Dr. Raskin organized participation in "World Water Monitoring Day (WWMD)" for 50 elementary school children (grades 3-4) in Ann Arbor, MI, June 2009. The students learned about the importance of water quality for all and sampled and analyzed Huron river water on a field trip. They submitted their data and a report to the WWMD website (<http://www.worldwatermonitoringday.org/>).

Dr. Raskin developed and delivered, with help from graduate student Lynn Williams, two 90-min science lessons (wastewater treatment and drinking water treatment) for two groups of 25 elementary school children (grades 3-4) in Ann Arbor, MI, April 2009. The students subsequently made a field trip to local wastewater and drinking water treatment plants.

Presented two seminars for approx. 500 water and wastewater treatment plant operators on "Pharmaceutical and Personal Care Products (PPCPs) in Drinking Water and Wastewater Treatment", MI American Water Works Association/MI Water Environment Association Joint Expo, Operator Day, Lansing, MI, Feb. 3, 2009.

In cooperation with the Eastern Michigan University GEAR UP project (<http://emugearup.org/>), Dr. Raskin presented "on being an environmental engineer" to three groups of approx. 15 middle school students, June 26, 2007.

Dr. Raskin developed and delivered with Diane Holder, David Berry, and a teacher, seven science lessons around water issues for two groups of 15 elementary school children (grades K-2 and 3-5) in Ann Arbor, MI, Jan. and Feb. 2006. The topics of the lessons were: Preventing Disease - students learned how illness-causing bacteria and viruses are spread; Amazing Water - students learned how actions in the home and yard affect water quality; Sum of the Parts - students learned about pollution of a river and how it can be reduced; Poison Pump - students discovered that (polluted) water can also produce negative effects for people; Water in Motion - students learned to appreciate the movement and sound of water in their environment; The Pucker Effect - students observed how ground water transports pollutants and discovered the source of contamination; Reaching Your Limits - students experienced the effort involved in meeting drinking-water quality standards.
